

# Lowlander<sup>®</sup> 105 Compact

The Lowlander 105 Compact manure spreader has been added to the top selling Mark 4 range. The specification has been so popular that it is now being offered as a model in it's own right. Introduced to meet the needs of farmers and contractors working in restricted or confined areas, it is 1060mm (41 3/4") shorter in length than the standard Lowlander 105, yet retains the same load carrying and spreading capabilities.
